

G-GP100

Technical specifications

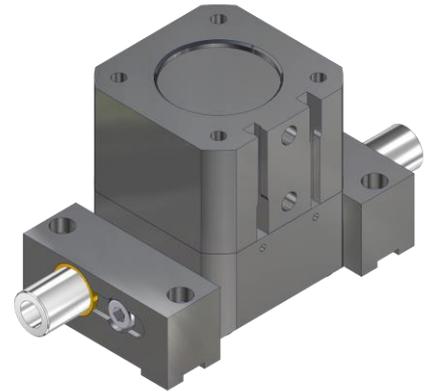

GRIP

Operating mode:

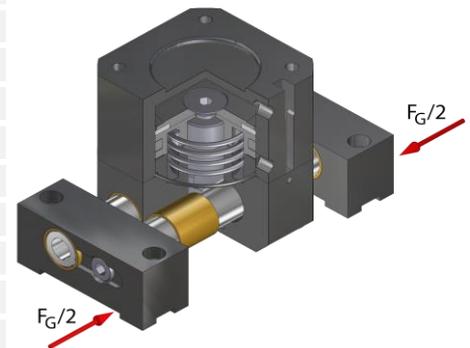

The double-acting cylinder is operated via pneum. compressed air and actuates the power unit. By two angularly arranged springs, which engage in the grooves of the bolts, the vertical is converted into horizontal movement.

Advantages:

- High life span
- Two stroke variants stroke 1 or stroke 2
- Mechanical interface according to DIN EN ISO 9409-12
- Low dead weight
- Optional gripping force safety device "opening" via pressure spring (7)
- Optional gripping force safety device "closing" via pressure spring (7)
- Depending on the mounting, gripping force safety device "closing" or "opening"
- Universal jaws (15) for easy mounting of specific fingers
- Piston position detection by means of proximity switch ZG-RSGU01 / 300-M8
